NS: Invariant Set: \phi_t(S) \subseteq S Lim Pts:
     FPDE: Types: 1^{st}: \exists scale s.t. solution found, not so for 2^{nd}. Heat: \hat{T} = u(\hat{T}_{\infty} - \hat{T}_{-\infty}) + \hat{T}_{-\infty} Oil
    Spread: Dims: x = x_f + \varepsilon \xi, t = \tau Ground Spread: (1-s)\phi h_t + Q_x = 0; Q \sim -hh_x, 0 < x_s < x_f. Have
    h(x_f) = 0, h_t(x_s) = 0, and hh_x|_{x=0,x_f} = 0 (i.e. no flux at centre and front), and h, hh_x cont. at joint.
    Expansions: Let \xi = z + \epsilon \eta for perturbations Scale: Try x = x_f + \epsilon \xi for groundwater Stefan: S_0 = \xi
    C\left(T_{1}-T_{m}\right)/L, condition = \rho L\dot{s}=kT_{x}|_{s-}^{s+} 1ph Stefan: Bar = T_{h}|liq|_{s}sol|INS. Use T=T_{m}+(T_{1}-T_{m})u
    s.t. S_0 u_t = u_{xx}, u = 1 @ x = 0, \{\dot{s} = -u_x, u = 0\} @ x = s, s(0) = 0. Sim. sol is s = \beta \sqrt{t}, f = f(x/\sqrt{t})
    2ph Stefan: Use T = T_m + (T_1 - T_m)u s.t. S_0u_t = u_{xx} @ 0 < x < s, (S_0/\kappa)u_t = u_{xx} @ s < x < 1, u = 1 @ x = 0, u_x = 0 @ x = 1, <math>\{\dot{s} = Ku_x|_{s_+} - u_x|_{s_-}, u = 0\} @ x = s, \{s = 0, u = -\theta\} @ x = 0. Here
    \theta := (T_m - T_0)/(T_1 - T_m), \kappa := c_1 k_1/(c_2 k_2), K := k_2/k_1 \text{ Sim. sol is } s = \beta \sqrt{t}, f = f(x/\sqrt{t}) \text{ 2-Dim:}
    U_n = \hat{n} \cdot u = K(u_2)_n - (u_1)_n. If x = f(y,t) then \hat{n} := \nabla (x-f) = [1,-f_y]^T/\sqrt{1+f_y^2} Welding:
11
     Have 0 < s_2 < s_1. Have cold x = a, no flux x = 0. \theta = 1 in liquid. In mush \rho L\theta_t = J^2/\sigma, CoE
12
     \to \theta \rho L \dot{s} + k T_x |_{s_-}^{s_+} = 0. Have \theta cont. (= 0) at s_1. I.e. we have S_0 u_t = u_{xx} + q, u_x = 0 @ x = 0, u = 0
13
     -1 @ x = 1, \theta = 0 @ x = s_1. Also \theta_t = q in mush.
14
     FMM: Integral Constraint If J[y] = \int F dx with \int G dx = C then \tilde{J}[y] = \int F - \lambda G dx Hamiltonian:
     H:=y'F_{y'}-F \rightarrow H'=-F_x. If F=F(y,\dot{y}) then H=C Hamilton's Eqs: p:=F_{y'},q=y
16
    and so p' = -H_q, q' = H_p Free Boundary: J[y, b] = \int_a^b F(x, y, y') dx where b free. Expand with
17
    y + \epsilon \eta, b + \epsilon \beta \to J = J_0 + \epsilon \left\{ \int_a^b \eta F_y + \eta' F_{y'} dx + \beta F(b, y(b), y'(b)) \right\}  If y(b) = d \to d = y(b + \epsilon \beta) + \epsilon \eta(b + \epsilon \beta) = 0
    y(b) + \epsilon(\beta y'(b) + \eta(b)) so \eta(b) = -\beta y'(b). IVP on integral so \beta [F - y'F_{y'}]_{x=b} + \int (\ldots) = 0 so F = y'F_y
19
    at free boundary. Control: Have \int \xi h_x + \eta h_u dt = 0, \dot{\xi} = \xi f_x + \eta f_u. Sub for \eta, IVP s.t. \frac{d}{dt} \frac{h_u}{f_u} = h_x - f_x \frac{h_u}{f_u}
20
    and \dot{x} = f Hamiltonian (Control): H := f \frac{h_u}{f_u} - h s.t. \dot{H} = \frac{h_u}{f_u} f_t - h_t \to \text{autonomous if } h_t = f_t = 0.
21
     Fredholm Alt Integ Eqs. For y = f + \int K(x,t)y(t)dt we have ONE (N) has a unique sol y = 0 if f = 0,
22
    and adjoint has unique sol, or TWO (H) as sols y_1 \dots y_r iff \forall solutions to H^*, z_i, we have \langle f, z_i \rangle = 0. EX:
23
    Solve y = f + \lambda \int \sin(x+t)y(t)dt. Unique sol iff (H) has trivial sol \to X_1 = \int y\cos(t) = \int \cos(t)y_H(t) \to \int \sin(x+t)y(t)dt.
    solve [1, -\lambda \pi; -\lambda \pi, 1][X_1, X_2]^T = [0, 0]^T \to \text{unique sol if } \lambda \neq \pm 1/\pi. In this case X_1 = \int \cos(x) y_N(x) =
25
     \lambda \pi X_2 + \int f(x) \cos(x), and similar for X_2. Invert matrix and solve. If non-unique sol, then find sols to
26
     (H) first. If \lambda = 1/\pi then X_1 = X_2 = X so Ly = y - \pi^{-1}(\sin(x) + \cos(x)) \int \cos(x)y(x)dx with sols
27
    y=c_1\left(\sin(x)+\cos(x)\right) by inspection. Problem self adjoint so Ly=0=L^*w so need \int f(x)w(x)=0
28
    i.e. \int f(x)(\sin(x)+\cos(x))=0, repeat for \lambda=-1/\pi. Then y=y_p(x)+\sum_i y_{h,i}(x) Fred Diff Eq. For
29
    nonunique sol to exist, need \langle Ly, w \rangle = \langle f, w \rangle \forall ws.t.L^*w = 0
